

Variation in antimicrobial usage in food animal production

Looking into choice of antimicrobial class and dosage
on pig, poultry, turkey and veal calf farms,

HOW

Administration
route

A central image of a brown chicken standing on a yellow surface. Surrounding it are other farm animals: a pig, a goat, a cow, a dog, and a fish. The background is dark blue at the top and yellow at the bottom.

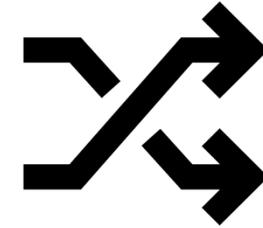

WE NEED YOU | TO HANDLE **ANTIMICROBIALS** WITH CARE

Fight
#AntiMicrobialResistance

- Misuse and overuse of antimicrobials increase resistance risk, endangering both animal and human health and welfare.
- But you can help. By acting prudently when using antimicrobials, you can preserve their efficacy for our future.

Methodology

Treatment incidence (TI)

$$\frac{\text{Total amount of antimicrobial drug used}}{\text{Dose} \times \text{Number of days at risk} \times \text{Kg animal at risk}}$$

(Timmerman et al., 2006)

Total amount of antimicrobial drug used

Dose × Number of days at risk × Kg animal at risk

Total amount of antimicrobial drug used or purchased

Dose × Number of days at risk × Kg animal at risk

Defined Daily Dose

→ **DDDvet**

→ **ESVAC**

Total amount of antimicrobial drug used or purchased

$$\text{Dose} \times \text{Number of days at risk} \times \text{Kg animal at risk}$$

Broilers (poultry) – DDDvet

Abbreviations used: DCDvet - defined course dose for animals; DDDvet - defined daily dose for animals; EU/EEA - European Union/European Economic Area; mg/kg - milligram active substance per kilogram body weight; VMP - veterinary medicinal product.

An underscore () in the substance indicates that the assigned DDDvet and DCDvet are subject to an exception which is explained in the comment.

Note: Data were originally collected for broilers, but values can be used as proxy for other poultry species.

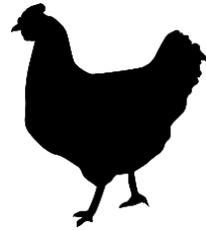

Substance	Antimicrobial class	Route	DDDvet	DCDvet	Unit	Comment
Amoxicillin	Penicillins with extended spectrum	Oral	16	74	mg/kg	
Ampicillin	Penicillins with extended spectrum	Oral	108	453	mg/kg	
Apramycin	Aminoglycosides	Oral	81	388	mg/kg	

Total amount of antimicrobial drug used or purchased

Dose × **Number of days at risk** × Kg animal at risk

Total amount of antimicrobial drug used or purchased

Dose × **Number of days at risk** × Kg animal at risk

Broilers
42 days
[35; 49]

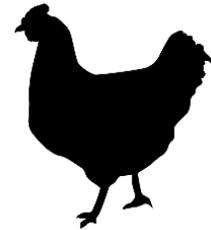

Total amount of antimicrobial drug used or purchased

Dose × Number of days at risk × **Kg animal at risk**

Total amount of antimicrobial drug used or purchased

Dose × Number of days at risk × **Kg animal at risk**

number of animals at risk x standard weight

1 kg
