**AntiMicrobial Consumption and Resistance in Animals -
AMCRA**

RESET MINDSET MODEL COMPRISING THE MOST IMPORTANT DRIVERS FOR HUMAN BEHAVIOUR CHANGE

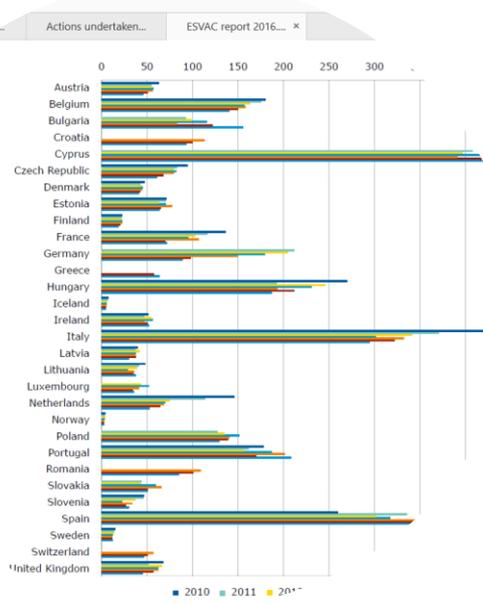

Lam et al., 2017

INCLUSION OF COUNTRIES

- having a great reduction of AMU during the last 5-6 years
- having a “historically” low AMU in animals

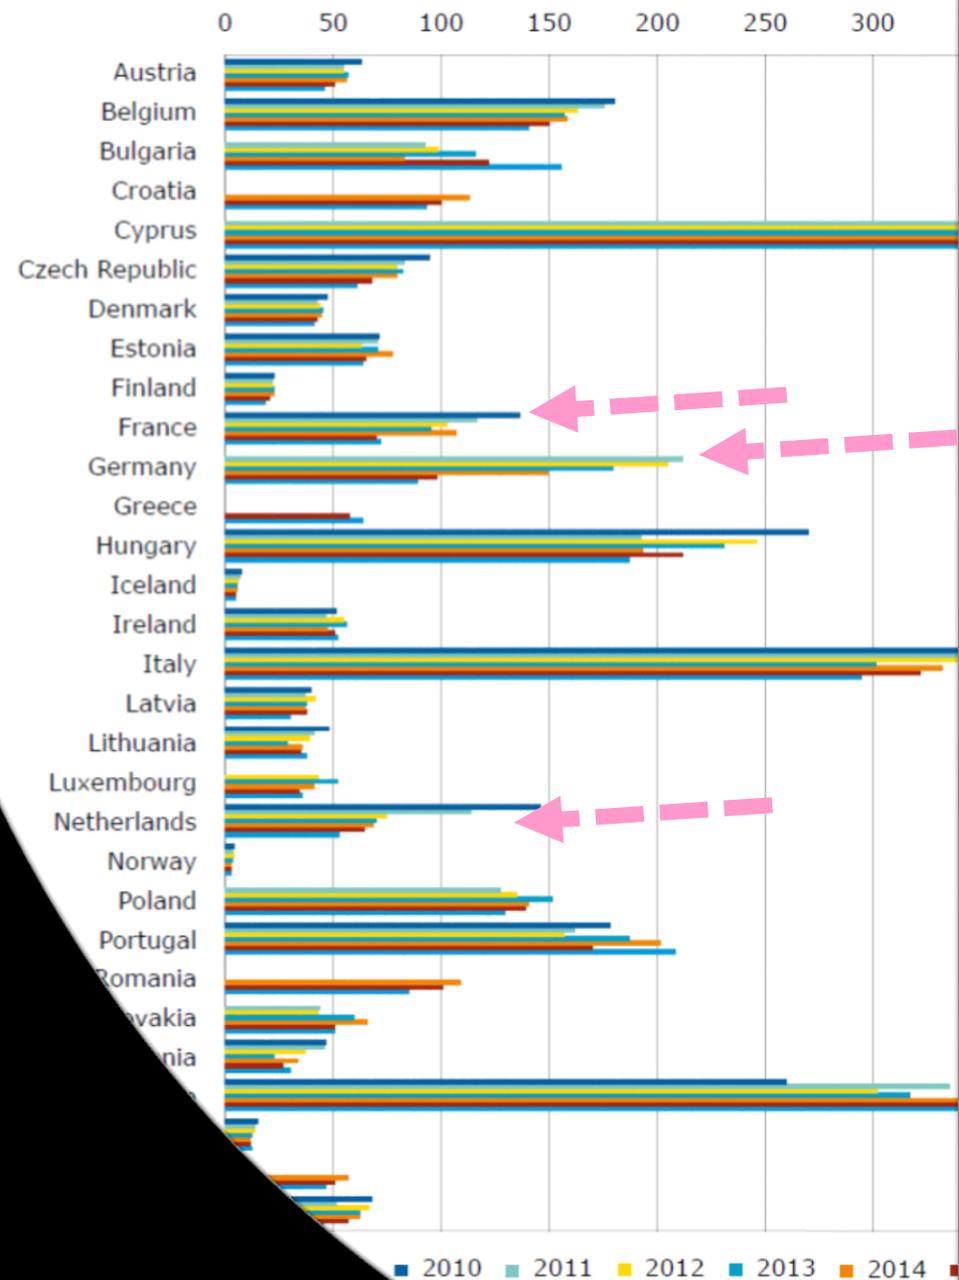

Mg active substance per Population Correction Unit (PCU); ESVAC, 2018

Center of expertise

Antimicrobial Consumption and Resistance in Animals

HAVING A GREAT REDUCTION OF AMU DURING THE LAST 5-6 YEARS

Three countries showed a reduction in AMU of at least 45% during the last 5 (Germany) or 6 years (The Netherlands and France).

Center of expertise

HAVING A HISTORICALLY LOW AMU IN VETERINARY MEDICINE

Defined as **less than 70 mg/PCU during the last 6 years.**

These countries have a **pig and/or poultry production** that is **comparable to Belgium in size**; these animal species are *known to be associated with a high AMU in Belgium.*

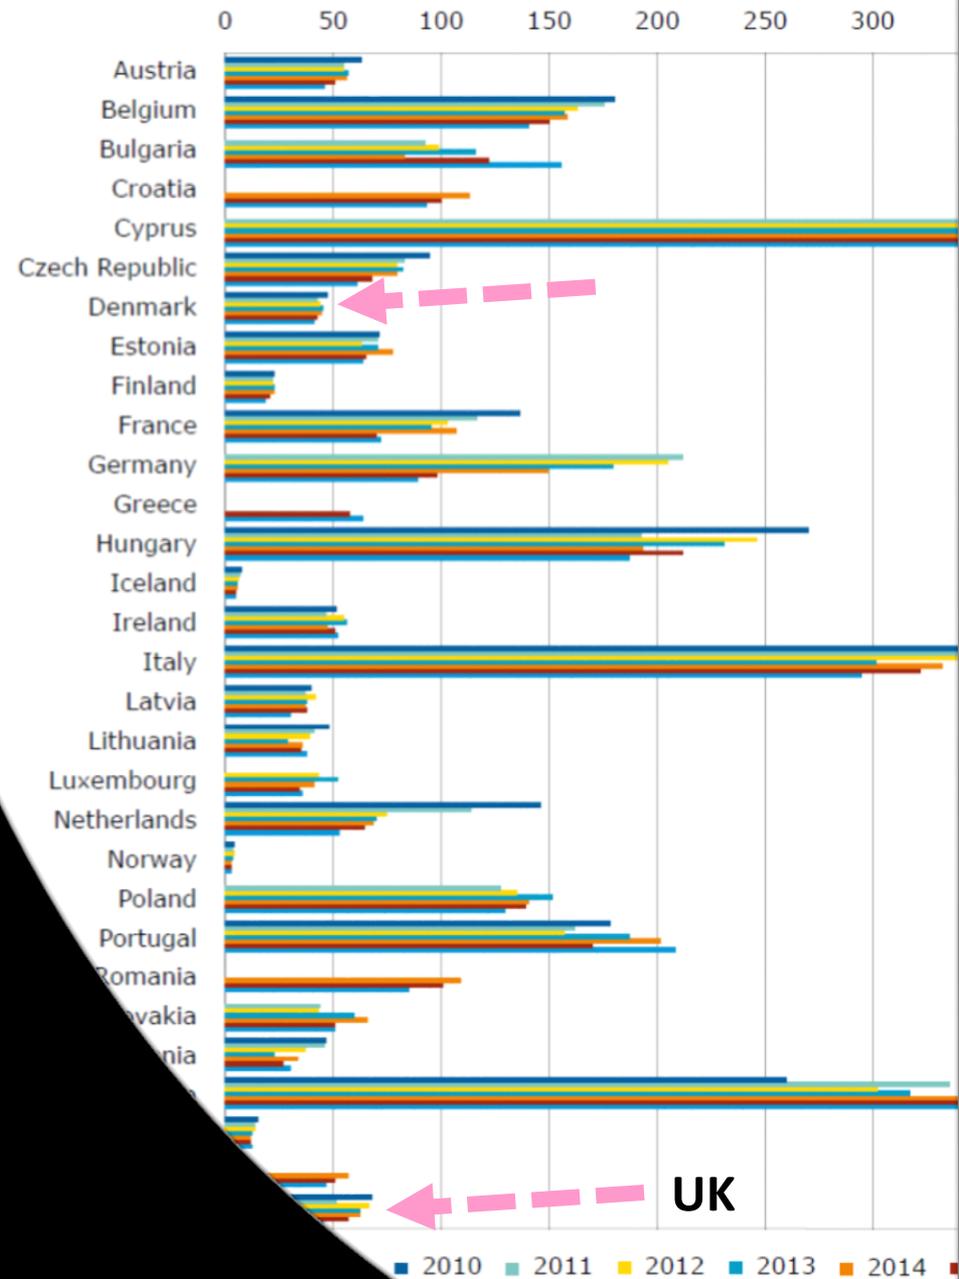

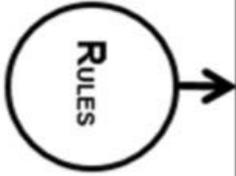

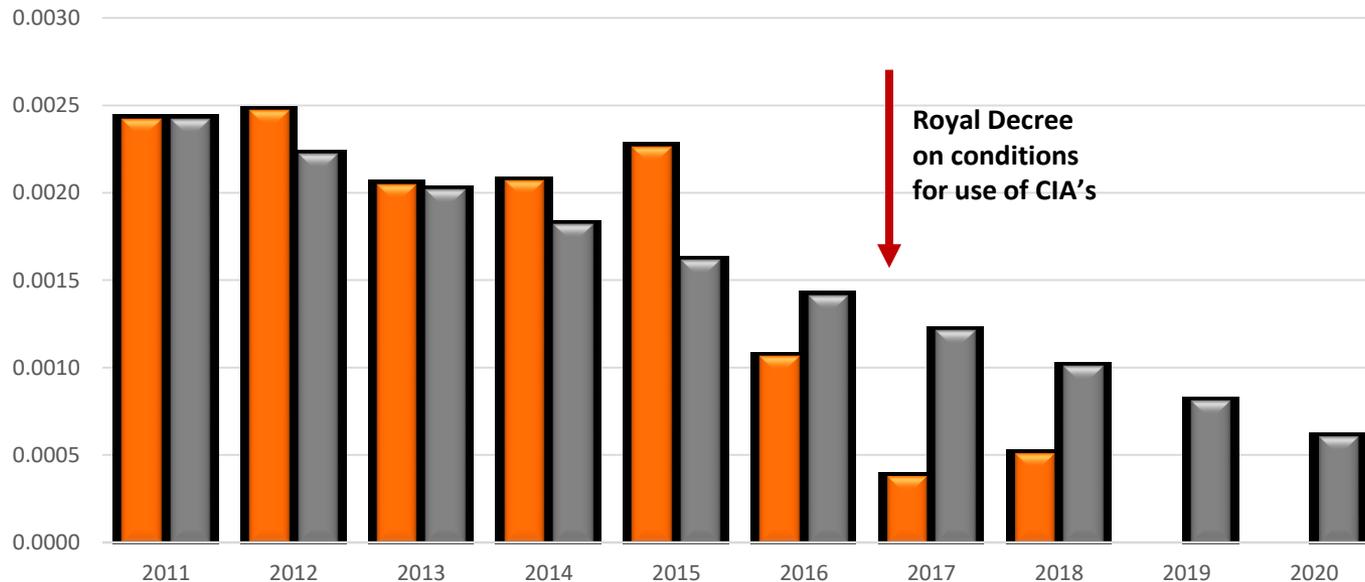

TABLE SUMMARIZING THE IDENTIFIED ACTIONS PER COUNTRY

	Rules	Education	Social pressure	Economics	Tools
The Netherlands	Autoregulation and new legislations	Reports on AMU and AMR; creation of SDa; Guidelines for veterinarians;	Reduction targets; Covenant;	Benchmarking farmers and veterinarians	Guidelines for veterinarians; Benchmarking farmers and veterinarians
France	Autoregulation and new legislations	Reports on AMU and AMR; reinforcement of diagnostic labs; trainings for veterinarians; research and development;	Reduction targets	Benchmarking farmers (not in all sectors and mostly voluntarily based)	Reinforcement of diagnostic labs;
Germany	New legislations	Report on AMU and AMR; reinforcement of diagnostic labs; Guidelines for veterinarians;	Interministerial working group on AMR; common goals in human and veterinary medicine	Tax on medicated feed	Reinforcement of diagnostic labs; Guidelines for veterinarians;
Denmark	New legislations	Report on AMU and AMR; Guidelines for veterinarians;	Reduction targets	Benchmarking of farmers; Tax on antimicrobials	Guidelines for veterinarians; Benchmarking farmers
United Kingdom	Autoregulation	Guidelines for veterinarians; creation of RUMA; Reports on AMU and AMR	Action plan common in human and veterinary medicine; Reduction targets	Publication antibiotic policy by UK main distributors	Guidelines for veterinarians;

Antimicrobial Consumption and Resistance in Animals

CONCLUSION

- Changing human behaviour is very **challenging**.
- No magic formulae for success!
- Countries with a reduced / low AMU were successful due to **combined actions on the different drivers of human behaviour change**.
- **Different parties** are therefore addressed otherwise, and this will help to advance a more sustainable animal husbandry.
- AMU in **Belgium** decreased significantly by intense collaboration of the most important stakeholders and the authorities, applying different drivers for changing human behaviour.
- Understanding how 'drivers' work, to implement them well!

THANK YOU!
